

Member of the SNC-Lavalin Group

Business area: Oil, Gas and Offshore Wind

Requirements: 2.2 Masters or MEng Degree in Chemical or Process Engineering

Our locations and what they do:

Within the oil and gas division, our operations focus on fixed and floating offshore structures, terminals, refineries, petrochemical plants and subsea pipelines. Having worked on thousands of oil and gas installations around the world, you'll join a team of over 20,000 experts located in North America, Australia, the Middle East, Europe and the UK. We work across the life cycle of the oil and gas industry, finding innovative solutions to complex challenges through the increased use of digital and immersive technologies, and have worked on over 700 projects in the last five years all around the world. We have provided unrivalled technical expertise and support to the oil and gas industry for more than four decades. Our highly skilled teams are leading technical developments across the globe and, with our input, problems are solved and critical decisions are made with confidence.

We have opportunities for graduates across a range of our Oil & Gas and Offshore Wind in the UK. From a Chemical Process degree, you could be working in one of the following teams, here's a little about what they do;

Scotland

Based in Aberdeen as a graduate process engineer, you'll be focused on projects in the Oil and Gas market, as a process/chemical engineer you could be involved in; working with North Sea operators in supporting them in their brownfield modification projects and/or operational support work in their daily production. This is a dynamic environment ensuring that code requirements, production efficiency and safe operations are maintained using innovative approaches to assets which, in some cases are 40 years old, operating efficiently and safely pushing your knowledge and capability to the full extent.

London and South East

Based in Epsom as a graduate process engineer you will work with the Fluids teams on projects primarily in the Oil & Gas and Offshore Wind market. Some of our recent projects include Prelude FLNG and Kincardine Offshore Wind Farm. We also provide analysis to support large infrastructure projects; notable examples include the Thames Tideway storm tunnel system and the Doha Metro rapid transit system in Qatar. We're looking for candidates who have a strong aptitude for fluid mechanics and heat transfer.

Locations for this business will include:

Aberdeen and Epsom
